

1x38 W **Constant Current** LED driver

Product code: 5730

38 W 220 – 240 V 0 / 50 – 60 Hz

- Maximum 38.5W load
- PCB Iset (patent pending) for setting the output current
- Low current ripple, complying with IEEE 1789 standard
- Open & short circuit protection
- Driver protection Class I
- Suitable for Class I luminaires
- Load output is basic isolated from the mains
- Protected up to 2 kV power network fast transients

Mains Characteristics

Voltage range	198 VAC – 264 VAC withstands min 176 VAC (max. 1 hour) max 300 VAC (max. 1 hour)
DC range	176 VDC - 280 VDC
starting voltage	> 190 VDC
Mains current at full load	0.17 A – 0.22 A
Frequency	0 / 50 Hz – 60 Hz
THD at full power	< 15 %
Leakage current to earth	< 0.3 mA
Tested surge protection	1 kV L-N, 2 kV L-GND (IEC 61000-4-5)
Tested fast transient protection	2 kV (IEC 61000-4-4)

Insulation between circuits & driver case

Mains circuit - Output	Basic isolated
Mains & output - Driver case	Basic insulation

Load Output (basic isolated)

Output current (I_{out})	350 mA (default) / 300 mA (PCB Iset removed)
Accuracy	± 5 %
Ripple	< 2 %*, at ≤ 120 Hz <small>*] Low frequency, LED load: Cree MX-3 LEDs or equivalent (total load dynamic resistance > 12 Ω)</small>
PstLM	< 1*
SVM	< 0.4* <small>*] At full load</small>
U_{out} (max) (abnormal)	160 V
Start time	< 1.1 s

I_{out}	350 mA	300 mA
PCB Iset	Not removed	Removed
P_{out} (max)	38.5 W	34.5 W
U_{out}	80 - 110 V	80 - 115 V
PF (λ) at full load	0.97	0.97
Efficiency (η) at full load	0.88	0.88

For more information how to use PCB Iset, please see the page 4.

Operating window

Driver performance

Operating Conditions and Characteristics

- Highest allowed t_c point temperature: 80 °C
- Ambient temperature range: -20 °C ... +50 °C
- Storage temperature range: -40 °C ... +80 °C
- Maximum relative humidity: No condensation
- Life time (90 % survival rate): 100 000 h, at $t_c = 70$ °C
70 000 h, at $t_c = 75$ °C
50 000 h, at $t_c = 80$ °C

Quantity of drivers per miniature circuit breaker 16 A Type C

Based on I_{cont}	Based on inrush current I_{peak}	Typ. peak inrush current I_{peak}	1/2 value time, Δt	Calculated energy, $I_{peak}^2 \Delta t$
56 pcs.	95 pcs.	8 A	26 μs	0.0013 A ² s

CONVERSION TABLE FOR OTHER TYPES OF MINIATURE CIRCUIT BREAKER

MCB type	Relative quantity of LED drivers
B 10 A	37 %
B 16 A	60 %
B 20 A	75 %
C 10 A	62 %
C 16 A	100 % (see table above)
C 20 A	125 %

Type C MCB's are strongly recommended to use with LED lighting. Please see more details in "MCB information" document in each driver product page in "downloads & links" section.

Connections and Mechanical Data

Wire size	0.5 mm ² – 1.5 mm ²
Wire type	Solid core and fine-stranded
Wire insulation	According to EN 60598
Maximum driver to LED wire length	1 m
Weight	155 g
IP rating	IP20

Connections

Note:

- Not suitable for load side switching operation

Dimensions (mm)

Using the PCB Iset current selection

1) To configure the LL1x21-CC for 300 mA output, the pre-cut piece of PCB must be removed. The piece is located next to input connector PE terminal, please see the illustration of PCB Iset piece in the Figure 1.

2) The recommended tool for removing the PCB Iset piece is side-cutting pliers, as seen in the Figure 2.

3) First cut the side of the PCB Iset piece following the pre-cut line, as seen in the Figure 3.

4) Next, snap the PCB Iset piece off of the main PCB.

5) Remove the piece completely, as seen in Figure 4.

6) Take special attention, that

- cutting surface has clean finish without any cracks on the PCB
- the PCB Iset piece does not get stuck under the main PCB
- the connector or the main PCB does not get damaged
- the insulating film does not get damaged.

7) After removing the PCB Iset piece, please note that the mains circuit PCB tracks are nearer to the PCB edge. Make sure, that the access to the conductor terminals and the part where the piece has been removed is restricted, for example by the luminaire design or by sufficient instructions and markings.

Figure 1.

Figure 2.

Figure 3.

Figure 4.

LL1x38-CC-350/300 LED driver is suited for built-in usage in luminaires. With LL1x2130-SR strain reliefs, independent use is possible too (see the LL1x2130-SR datasheet for details). In order to have safe and reliable LED driver operation, the LED luminaires will need to comply with the relevant standards and regulations (e.g. IEC/EN 60598-1). The LED luminaire shall be designed to adequately protect the LED driver from dust, moisture and pollution. The luminaire manufacturer is responsible for the correct choice and installation of the LED drivers according to the application and product datasheets. Operating conditions of the LED driver may never exceed the specifications as per the product datasheet.

Installation & operation

Maximum t_c temperature:

- Reliable operation and lifetime is only guaranteed if the maximum t_c point temperature is not exceeded under the conditions of use
- Ensure that the t_c point temperature does not rise higher than specified on the product datasheets

Lamp failure functionality

No load

When open load is detected, driver limits output voltage according to $U_{out} (max)$ (abnormal).

Short circuit

Driver can withstand output short circuit.

LED driver earthing

- LL1x38-CC-350/300 LED driver is a protective Class I device and designed for Class I luminaires.
- Devices with protective earth terminal marked with symbol  while used in Class I luminaires must always have the earth cable connected for safety reasons.

Conformity & standards

General and safety requirements	EN 61347-1
Particular safety requirements for DC or AC supplied electronic control gear for LED modules	EN 61347-2-13
Thermal protection class	EN 61347, C5e
Mains current harmonics	EN 61000-3-2
Limits for voltage fluctuations and flicker	EN 61000-3-3
Radio frequency interference	EN 55015
Immunity standard	EN 61547
Performance requirements	EN 62384
Recommended Practices for Modulating Current in High-Brightness LEDs for Mitigating Health Risks to Viewers	IEEE 1789-2015
Compliant with relevant EU directives	
RoHS/REACH compliant	
CE / UKCA Marked	

Label symbols

Thermally controlled control gear, incorporating means of protection against overheating to prevent the case temperature under any conditions of use from exceeding 130 °C.
