LL1x80-DA-350-700

80 W Dimmable DALI LED driver

- DALI dimmable LED driver, 1 - 100 % dimming range
- Enhanced Hybrid dimming, with varying PWM frequency
- Very high efficiency up to 94 %
- Low current ripple
- Suitable for use in emergency lighting applications
- Long lifetime up to 100 000 h
- Driver protection Class I
- Ideal solution for Class I luminaires, suitable for Class II luminaires too*

* See page 5 for details.

Mains Characteristics

- Voltage range: 198 VAC – 264 VAC
- DC range: 176 VDC – 280 VDC
- Starting voltage: > 190 VDC
- Mains current at full load: 0.34 – 0.44 A
- Frequency: 0 / 50 Hz – 60 Hz
- Stand-by power consumption: < 0.3 W
- THD at full power: < 12 %
- Leakage current to earth: < 0.4 mA
- Tested surge protection: 1 kV L-N, 2 kV L-GND (IEC 61000-4-5)
- Tested fast transient protection: 4 kV (IEC 61000-4-4)

Insulation between circuits & driver case

- Mains circuit - Output: Non-isolated
- DALI circuit - Output: Basic insulation
- Mains circuit - DALI circuit: Basic insulation
- Mains, DALI and output - Driver case: Basic insulation

Load Output (non-isolated)

- Output current (I_{out}): 350 mA (default) – 700 mA
- Accuracy: ± 5 %
- Ripple: < 2 %* at ≤ 120 Hz
- U_{out}(max) (abnormal): 400 V
- Outrush current: 1200 mA*

* Low frequency, LED load: Cree MX3 LEDs

EOF (EL use)

- Efficiency [n] at full load: 94 %
- Power factor (PF) at full load: 0.98
- Power (P) at full load: 80 W
- Output (U_{out}) range: 71 – 228 V

80 W 220 – 240 V 0 / 50 – 60 Hz

Product code: 5556

Helvar | Helvar Oy Ab, Keilaranta 5 FI-02150 Espoo, Finland. Data is subject to change without notice. www.helvar.com
Operating window

![Operating window graph]

Note: Dimming between 1 % - 100 % possible across the whole operating window

Driver performance

![Driver performance graphs]

Operating Conditions and Characteristics

- Highest allowed \( t_c \) point temperature* 85 °C
- \( t_c \) life (50 000 h) temperature 75 °C
- Ambient temperature range**
  - in independent use -20 °C ... +50 °C
  - +40 °C
- Storage temperature range -40 °C ... +80 °C
- Maximum relative humidity No condensation
- Lifetime [90 % survival rate]
  - 100 000 h, at \( t_c = 65 °C \)
  - 50 000 h, at \( t_c = 75 °C \)
  - 25 000 h, at \( t_c = 85 °C \)

*) ENEC certified only up to \( t_c \) life temperature

**) For other than independent use, higher \( t_c \) of the controlgear possible as long as highest allowed \( t_c \) point temperature is not exceeded
Hybrid dimming technique

Helvar hybrid dimming products combine both Constant Current Reduction (CCR) amplitude dimming and Pulse Width Modulation (PWM) dimming. CCR is a very efficient technique for dimming the light output, especially on higher range. On lower range, the hybrid dimming products implement high-frequency PWM dimming according to the table above.

Quantity of drivers per miniature circuit breaker 16 A Type C

<table>
<thead>
<tr>
<th>MCB type</th>
<th>Relative quantity of LED drivers</th>
</tr>
</thead>
<tbody>
<tr>
<td>B 10 A</td>
<td>37 %</td>
</tr>
<tr>
<td>B 16 A</td>
<td>60 %</td>

</tr>
</tbody>
</table>

Type C MCB’s are strongly recommended to use with LED lighting. Please see more details in “MCB information” document in each driver product page in “downloads & links” section.
Connections and Mechanical Data

- **Wire size**: 0.5 mm² – 1.5 mm²
- **Wire type**: Solid core and fine-stranded
- **Wire insulation**: According to EN 60598
- **Maximum driver to LED wire length**: 5 m
- **Weight**: 220 g
- **IP rating**: IP20

Connections

Note:
- Label may differ if the unit is preset to fixed current

Dimensions (mm)

- **Length**: 270 mm
- **Width**: 21 mm
- **Height**: 30 mm

Output current can be set with the current setting resistor connected to the Iset terminal. Example current and resistor values across the range can be found in the following table. More information about the current setting resistor is given on page 5.

LL1x80-DA-350-700 LED driver is suited for built-in usage in luminaires. With LL1x2130-SR strain reliefs, independent use is possible too (see the LL1x2130-SR datasheet for details). In order to have safe and reliable LED driver operation, the LED luminaires will need to comply with the relevant standards and regulations (e.g. IEC/EN 60598-1). The LED luminaire shall be designed to adequately protect the LED driver from dust, moisture and pollution. The luminaire manufacturer is responsible for the correct choice and installation of the LED drivers according to the application and product datasheets. Operating conditions of the LED drivers may never exceed the specifications as per the product datasheet.

Installation & operation

Maximum ambient and $t_c$ temperature

- For built-in components inside luminaires, the $t_a$ ambient temperature range is a guideline given for the optimum operating environment. However, integrator must always ensure proper thermal management (i.e. mounting base of the driver, air flow etc.) so that the $t_c$ point temperature does not exceed the $t_c$ maximum limit in any circumstance.
- Reliable operation and lifetime is only guaranteed if the maximum $t_c$ point temperature is not exceeded under the conditions of use.

Current setting resistor

LL1x80-DA-350-700 LED driver features a constant current output adjustable via current setting resistor or software.

- An external resistor can be inserted in to the current setting terminal, allowing the user to adjust the LED driver output current.
- When no external resistor is connected, then the LED drivers will operate at their default lowest current level.
- A standard through-hole resistor can be used for the current setting. To achieve the most accurate output current it is recommended to select a quality low tolerance resistor. Minimum diameter for resistor leg is 0.51mm.
- Always connect the current setting resistor only into the terminals marked with Iset on the LED driver label.
- For the resistor / current value selection, refer to the table on page 4.

Miniature Circuit Breakers (MCB)

- Type-C MCB’s with trip characteristics in accordance to EN 60898 are recommended.
- Please see more details in "MCB information" document in each driver product page in "downloads & links" section.

Use of Switch-Control functionality

- Maximum numbers of LED drivers to be connected to one switch is 30.
- The maximum cabling length from the switch to the driver is 25 meters. If longer cabling is needed, please connect a capacitor across the Switch-Control input (1 μF, min. 275 Vac RMS and X2 rated, according to IEC60384-14).
- Ensure that all components connected to Switch-Control circuitry are mains rated.

Installation site

- The general preferred installation position of LED drivers for independent use is to have the top cover facing upwards.

Helvar Driver Configurator support

LL1x80-DA-350-700 LED driver is supported by Helvar Driver configurator software. The driver supports output current setting with software, the output current of the driver can be programmed using Helvar Driver Configurator, as well as parameters for functions such as CLO. Also the operation of the multifunction Iset terminal usage can be changed from current setting resistor (default) to NTC overtemperature protection operation.

Lamp failure functionality

No load: When open load is detected, driver will go to standby. Automatic recovery is on during the first 10 minutes. If open load is still detected after the first 10 minutes, driver goes to standby mode and recovers through mains reset.

Overload: When high overload is detected, driver goes to standby mode and follows the same logic as described in the short circuit condition. When low overload is detected (up to 85 W), output current will be reduced to have maximum rated output power.

Underload: When undervoltage is detected, driver goes to standby mode and returns through mains reset.

Short circuit: When short circuit is detected, driver goes to standby mode and returns through mains reset.

NTC trigger: When NTC is enabled via Helvar Driver Configurator, driver follows NTC feature behaviour. Default NTC trigger point is 8,2 kΩ, after which the driver starts to decrease the output level.
