LC51SE-DA-900-1400-LOOP
51 W SELV Dimmable DALI-2 LED driver

Product code: 5741
51 W 220 – 240 V 0/ 50 – 60 Hz

• DALI-2 certified LED driver, 1-100 % dimming range
• SELV output protection for safety and flexibility in luminaires
• Amplitude dimming for the highest quality light output
• NFC technology for wireless programming
• Low current ripple, complying with IEEE 1789 recommendation
• Suitable for DC use
• Optimised driver mechanics for independent usage applications
• Integrated spacious strain reliefs with screwless clamps, quick and simple installation process
• Doubled input terminals for looping the mains and DALI cables
• Ideal solution for Class I, Class II and Class III (SELV) luminaires

Functional Description
• Adjustable constant current output: 900 mA [default] to 1400 mA
• Current setting programmable via NFC, DALI or with external (LED-Iset) resistors
• Suitable for flicker-free camera recording applications
• Latest technology Switch-Control 2 functionality for easy-to-use intensity control
• Innovative Direct Control technology to support easy luminaire-based personal lighting level control*
• Full load recognition with automatic recovery, open and short circuit protection
• Multipurpose terminal LED-Iset/NTC for current setting or overtemperature protection
• Constant Light Output (CLO), adjustable up to 100 000 h [default disabled]
• Energy consumption monitor (real time), running hour monitor (accumulative), energy management (accumulative)
• Memory bank for OEM customer data
*Available since revision C

Mains Characteristics
Voltage range 198 VAC – 264 VAC
Withstands max. 320 VAC (max. 1 hour)
DC range 176 VDC - 280 VDC
starting voltage > 190 VDC
Mains current at full load 0.22 – 0.31 A
Frequency 0 / 50 Hz – 60 Hz
Stand-by power consumption < 0.5 W
THD at full power < 10 %
Leakage current to earth < 0.3 mA
Tested surge protection 1 kV L-N, 2 kV L-GND (IEC 61000-4-5)
Tested fast transient protection 2 kV (IEC 61000-4-4)

Insulation between circuits & driver case
Mains circuit - SELV circuit Double/reinforced insulation
DALI circuit - SELV circuit Double/reinforced insulation
Mains circuit - DALI circuit Basic insulation
Mains, DALI and output - Driver case Double/reinforced insulation
Mains input - Ground input Basic insulation

Load Output (SELV <60 V)
Output current (I_{out}) 900 mA [default] – 1400 mA
Accuracy ± 5 %
Ripple < 1 %* at ≤ 120 Hz
PstLM < 1 *
SVM < 0.4 *
U_{out} (max) [abnormal] 60 V

Operating window

Note: Dimming between 1% - 100% possible across the whole operating window

Driver performance

Operating Conditions and Characteristics

- Absolute highest allowed \( t_{\text{c point}} \) temperature: 80 °C
- \( T_{\text{c life}} \) (60 000 h) temperature: 80 °C
- Ambient temperature range in independent use: -25 °C ... +45 °C
- Storage temperature range: -40 °C ... +80 °C
- Maximum relative humidity: No condensation
- Life time (90% survival rate): 100 000 h, at \( t_{\text{c}} = 70 °C \), 90 000 h, at \( t_{\text{c}} = 75 °C \), 60 000 h, at \( t_{\text{c}} = 80 °C \)

*) For other than independent use, higher \( t_{\text{a}} \) of the controlgear possible as long as highest allowed \( t_{\text{c point}} \) temperature is not exceeded

CONTINUOUS CURRENT

Total continuous current of the drivers and installation environment must always be considered and taken into calculations when installing drivers behind miniature circuit breaker. Example calculation of total drivers amount limited by continuous current: \( n(I_{\text{cont}}) = \frac{16 A \cdot (I_{\text{nom},T_a})}{\text{nominal mains current with full load}} \times 0.76 \). This calculation is an example according to recommended precautions due to multiple adjacent circuit breakers (> 9 MCBs) and installation environment (\( T_{30} \) degrees); variables may vary according to the use case. Both inrush current and continuous current calculations are based on ABB S200 series circuit breakers. More specific information in ABB series S200 circuit breaker documentation.

NOTE! Type C MCB’s are strongly recommended to use with LED lighting. Please see more details in “MCB information” document in each driver product page in “downloads & links” section.
Amplitude dimming technology

LC51SE-DA-900-1400-LOOP LED driver implements amplitude dimming technology across whole dimming range. Amplitude dimming offers the best available technology for dimming the light output in an accurate and flicker-free way to ensure high quality lighting in even the most demanding situations such as camera recording applications. Amplitude dimming technology complies with IEEE 1789-2015 recommendations of current modulation to mitigate health risks to viewers.

Wireless configuration

LC51SE-DA-900-1400-LOOP LED driver is equipped with NFC wireless technology for effortless configuration of the driver via Helvar Driver Configurator Support. Helvar Driver Configurator enables easy-to-use automatic configuration of the driver parameters via NFC, without mains or DALI connection to the driver. The most popular MD-SIG qualified NFC readers (FEIG CPR30-USB & ISC.MR102-USB) are supported giving flexibility for the operator. For further information about the usage with Helvar Driver Configurator, please see the user guide at www.helvar.com

Direct Control

LC51SE-DA-900-1400-LOOP LED driver supports innovative Direct Control functionality, enabled in Helvar Driver Configurator. With Direct Control enabled (disabled as default), the user is able to control the light level via Iset / LED-Iset terminal with single switch (push to make), such as pull cord mechanism or local push button. This gives the unique possibility to implement luminaire-based control in the most simple manner. Direct Control follows the same operation logic as Switch-Control (more details on page 6).

Connections

Dimensions (mm)

The LED-Iset resistor/current setting values are adjusted according to the LEDset specification. The resistor value for each required output current can thus be calculated from the formula \( R \ [\Omega] = \left( \frac{5 \ [V]}{I_{out} \ [A]} \right) \times 1000 \). Below are the available LED-Iset resistors from Helvar, pre-adjusted for the most common output currents.

Helvar LED-Iset resistors and currents (Nominal \( I_{out} \ [\pm 5 \% \ tol.] \))

<table>

</tbody>
</table>

The current can be adjusted also with normal resistors by selecting suitable resistor value (formula \( R [\Omega] = \left( \frac{5 [V]}{I_{out} [A]} \right) \times 1000 \)). Reference resistor values can be found below order code in the table above.
LC51SE-DA-900-1400-LOOP LED driver is suited for independent use and built-in usage in luminaires. In order to have safe and reliable LED driver operation, the LED luminaires will need to comply with the relevant standards and regulations (e.g. IEC/EN 60598-1). The LED luminaire shall be designed to adequately protect the LED driver from dust, moisture and pollution. The luminaire manufacturer is responsible for the correct choice and installation of the LED drivers according to the application and product datasheets. Operating conditions of the LED drivers may never exceed the specifications as per the product datasheet.

Installation & operation

Maximum ambient and \( t_c \) temperature:
- For built-in components inside luminaires, the \( t_a \) ambient temperature range is a guideline given for the optimum operating environment. However, integrator must always ensure proper thermal management (i.e. mounting base of the driver, air flow etc.) so that the \( t_c \) point temperature does not exceed the \( t_c \) maximum limit in any circumstance.
- Reliable operation and lifetime is only guaranteed if the maximum \( t_c \) point temperature is not exceeded under the conditions of use.

Current setting resistor
LC51SE-DA-900-1400-LOOP LED driver features a constant current output adjustable via current setting resistor.
- An external resistor can be inserted in to the current setting terminal, allowing the user to adjust the LED driver output current.
- When no external resistor is connected, then the LED drivers will operate at their default lowest current level.
- A standard through-hole resistor can be used for the current setting. To achieve the most accurate output current it is recommended to select a quality low tolerance resistor. Minimum diameter for resistor leg is 0.51mm.
- Always connect the current setting resistor only into the terminals marked with LED-Iset on the LED driver label.
- For the resistor/current values, refer to the table on page 4.

LED driver earthing
- LC51SE-DA-900-1400-LOOP is Class I LED driver suitable for Class I and II luminaires, as well as driving Class III (SELV) luminaire parts in independent installation.
- If used inside Class I luminaires, the earth cable is not required for electrical safety in this driver. The PE connection is designed for earth signal looping between drivers.
- If used inside Class II luminaires, the safety of the luminaire shall be ensured through double/reinforced insulation of live parts. LC51SE-DA-900-1400-LOOP has double/reinforced insulation between accessible and live parts, and is suitable for use in all Class II luminaires. In this case the earth terminal of the driver must be left unconnected and the luminaire terminal block shall not have any protective earthing terminal.
- If used in independent installation with Class I/II/III luminaires, the earth cable is not required to be connected. The PE connection is designed for earth signal looping between drivers.

Miniature Circuit Breakers (MCB)
- Type-C MCB’s with trip characteristics in accordance to EN 60898 are recommended.
- Please see more details in “MCB information” document in each driver product page in “downloads & links” section.

Installation site
- The general preferred installation position of LED drivers for independent use is to have the top cover facing upwards.
- Minimum recommended distances below:
  - Suitable for installation upside down and in the corner, in this case separate spacers must be used. For more information, please consult Helvar.

Helvar Driver Configurator -support
LC51SE-DA-900-1400-LOOP LED driver is supported by Helvar Driver configurator software. The LC51SE-DA-900-1400-LOOP driver supports output current setting with software, the output current of the driver can be programmed using Helvar Driver Configurator, as well as OEM customer data and parameters for functions such as CLO. Programming the driver with Helvar Driver Configurator can be done either wirelessly via NFC or then via DALI bus. Also the operation of the multifunction LED-Iset terminal usage can be changed from current setting resistor (default) to NTC overtemperature protection operation or to Direct Control functionality.
Lamp failure functionality

No load
When open load is detected, driver will go to standby power consumption and remains in automatic recovery mode. In automatic recovery mode, the driver waits till load is returned and once that happens, it returns to normal operation.

Short circuit
When short circuit is detected, driver goes to automatic recovery mode and follows the same logic as described in the no load condition.

Overload
When overload is detected, driver goes to standby mode and returns through mains reset.

Underload
When undervoltage is detected, driver goes to standby mode and returns through mains reset.

NTC trigger
When NTC is enabled via Helvar Driver Configurator, driver follows NTC feature behaviour. Default NTC trigger point is 8.2 kΩ, after which the driver starts to decrease the output level.

Switch-Control 2 & Direct Control

Use of Switch-Control functionality
- Maximum numbers of LED drivers to be connected to one switch is 60. Wire length is not restricted by the driver technology.
- Ensure that all components connected to Switch-Control circuitry are mains rated.
- The X2 rated (1 μF) capacitor has to be installed between control lines incase of unwanted behavior of lights. See details and guidance from the user guide.

Use of Direct Control functionality
- Maximum one LED driver shall be connected to single switch through Direct Control.
- Maximum wire length between driver and the switch is 10 m.
- By default, Direct Control is disabled and LED-Iset terminal is used for current setting. When enabled through the Helvar Driver Configurator, the current is set by the software.
- With SELV60 drivers the Direct Control circuit is SELV60 circuit. The components can be rated accordingly.
- DALI usage not supported at the same time with Direct Control.
