Functional Description

- Adjustable constant current output: 350 mA (default) to 700 mA
- Current setting programmable via DALI or with external resistors
- Filtered dimming for high-quality light in every application
- Latest technology Switch-Control 2* functionality for easy-to-use intensity control
- Adaptive LED overload protection, reduces output current if overvoltage is detected
- Full load recognition with automatic recovery, open and short circuit protection
- Multipurpose terminal Iset/NTC for current setting or overtemperature protection
- Constant Light Output (CLO), adjustable up to 100 000 h (default disabled)
- Power consumption monitor [real time], running hour monitor [accumulative], energy management [accumulative]

*Mains Characteristics

Voltage range     198 VAC – 264 VAC
DC range     176 VDC – 280 VDC
starting voltage > 190 VDC
Mains current at full load    0.53 - 0.71 A
Frequency     0 / 50 Hz – 60 Hz
Stand-by power consumption < 0.5 W
THD at full power    < 10 %
Leakage current to earth   < 0.5 mA
Tested surge protection 1 kV L-N, 2 kV L-GND (IEC 61000-4-5)
Tested fast transient protection 4 kV (IEC 61000-4-4)

Insulation between circuits & driver case

Mains circuit - Output    Non-isolated
DALI circuit - Output    Basic insulation
Mains circuit - DALI circuit    Basic insulation
Mains, DALI and output - Driver case  Basic insulation

Load Output

Output current (I_{out}) 350 mA (default) – 700 mA
Accuracy ± 5 %
Ripple < 2 %* at < 120 Hz
U_{out} (max) (abnormal) 400 V
Outrush current 1100 mA*

\* Low frequency, LED load: Cree XM-L LEDs

*When starting driver with short-circuited load or connecting load to running driver
Operating window

![Graph showing output voltage vs. output current]

*Note: Dimming between 1% - 100% possible across the whole operating window*

Driver performance

![Graphs showing typical efficiency and typical power factor]

Operating Conditions and Characteristics

- Absolute highest allowed $t_c$ point temperature*: 90 °C
- $t_c$ life [60 000 h] lifetime temperature: 80 °C
- Ambient temperature range**: $-25 °C ... +50 °C$
- Storage temperature range: $-40 °C ... +80 °C$
- Maximum relative humidity: No condensation
- Lifetime (90% survival rate): 100 000 h, at $t_c = 70 °C$
  60 000 h, at $t_c = 80 °C$
  30 000 h, at $t_c = 90 °C$

*) ENEC certified only up to $t_c$ life temperature

**) For other than independent use, higher $t_c$ of the controlgear possible as long as highest allowed $t_c$ point temperature is not exceeded
Filtered dimming technology

Filtered dimming technology is created to achieve extremely high quality and flicker free light output even at the lowest dimming levels. Light output is dimmed with amplitude dimming until the very lowest light levels (< 3%) and below that, stable light output is provided with filtered high frequency signal. Dimming technology complies with IEEE 1789-2015 recommendations of current modulation to mitigate health risks to viewers.

**CONTINUOUS CURRENT**

Total continuous current of the drivers and installation environment must always be considered and taken into calculations when installing drivers behind miniature circuit breaker. Example calculation of total drivers amount limited by continuous current: \( n(I_{\text{cont}}) = \frac{16 A \cdot I_{\text{peak}}}{\text{nominal mains current with full load}} \times 0.76 \). This calculation is an example according to recommended precautions due to multiple adjacent circuit breakers (> 9 MCBs) and installation environment (T, 30 degrees); variables may vary according to the use case. Both inrush current and continuous current calculations are based on ABB S200 series circuit breakers. More specific information in ABB series S200 circuit breaker documentation.

NOTE! Type C MCB's are strongly recommended to use with LED lighting. Please see more details in "MCB information" document in each driver product page in "downloads & links" section.
Connections and Mechanical Data

- **Wire size**: 0.5 mm² – 1.5 mm²
- **Wire type**: Solid core and fine-stranded
- **Wire insulation**: According to EN 60598
- **Maximum driver to LED wire length**: 5 m
- **Weight**: 306 g
- **IP rating**: IP20

**Connections**

**Dimensions (mm)**

Output current can be set with the current setting resistor connected to the Iset terminal. Example current and resistor values across the range can be found in the following table. More information about the current setting resistor is given on page 4.

**Iset current setting resistor values, E48 series (Nominal I\_\text{\(\text{set}\)} (±5 % to.l.))**

LL1x150-CR-DA LED driver is suited for built-in usage in luminaires. With LL1x2130-SR strain reliefs, independent use is possible too [see the LL1x2130-SR datasheet for details]. In order to have safe and reliable LED driver operation, the LED luminaires will need to comply with the relevant standards and regulations (e.g., IEC/EN 60598-1). The LED luminaire shall be designed to adequately protect the LED driver from dust, moisture and pollution. The luminaire manufacturer is responsible for the correct choice and installation of the LED drivers according to the application and product datasheets. Operating conditions of the LED drivers may never exceed the specifications as per the product datasheet.

**Installation & operation**

**Maximum ambient and $t_c$ temperature**
- For built-in components inside luminaires, the $t_c$ ambient temperature range is a guideline given for the optimum operating environment. However, integrator must always ensure proper thermal management (i.e., mounting base of the driver, air flow etc.) so that the $t_c$ point temperature does not exceed the $t_c$ maximum limit in any circumstance.
- Reliable operation and lifetime is only guaranteed if the maximum $t_c$ point temperature is not exceeded under the conditions of use.

**Current setting resistor**
LL1x150-CR-DA LED driver features a constant current output adjustable via current setting resistor or software.
- An external resistor can be inserted in to the current setting terminal, allowing the user to adjust the LED driver output current
- When no external resistor is connected, then the LED drivers will operate at their default lowest current level
- A standard through-hole resistor can be used for the current setting. To achieve the most accurate output current it is recommended to select a quality low tolerance resistor. Minimum diameter for resistor leg is 0.51mm.
- Always connect the current setting resistor only into the terminals marked with Iset on the LED driver label.
- Specific Iset resistor/current values are presented in the table on page 3.

**Miniature Circuit Breakers (MCB)**
- Type-C MCB’s with trip characteristics in according to EN 60898 are recommended.
- Please see more details in “MCB information” document in each driver product page in “downloads & links” section.

**Switch-Control 2**

**Use of Switch-Control functionality**
- Maximum numbers of LED drivers to be connected to one switch is 60. Wire length is not restricted by the driver technology.
- Ensure that all components connected to Switch-Control circuitry are mains rated.

**Helvar Driver Configurator -support**
LL1x150-CR-DA LED driver is supported by Helvar Driver configurator software. The LL1x150-CR-DA driver supports output current setting with software, the output current of the driver can be programmed using Helvar Driver Configurator, as well as parameters for functions such as CL0. Also the operation of the multifunction Iset terminal usage can be changed from current setting resistor (default) to NTC overtemperature protection operation.

**Lamp failure functionality**

**No load**
When open load is detected, driver will go to standby. Automatic recovery is on during the first 10 minutes. If open load is still detected after the first 10 minutes, driver goes to standby mode and recovers through mains reset.

**Short circuit**
When short circuit is detected, driver goes to standby mode and returns through mains reset or DALI command.

**Overload**
When high overload is detected, driver goes to standby mode and follows the same logic as described in the short circuit condition. When low overload is detected, output current will be reduced to have maximum rated output power.

**Underload**
When undervoltage is detected, driver goes to standby mode and returns through mains reset.

**NTC trigger**
When NTC is enabled via Helvar Driver Configurator, driver follows NTC feature behaviour. Default NTC trigger point is 8,2 kΩ, after which the driver starts to decrease the output level.
