

Helvar announces the addition of Ingy to its Freedom partners of wireless luminaire components

Helvar, a global manufacturing supplier of LED luminaire components, today announces that its Freedom wireless product family will be compatible with the Ingy smart lighting system. Helvar's customers can now order a full range of non-isolated and isolated LED drivers together with the Freedom Node radiocommunication unit pre-equipped with the Ingy smart lighting system. The Freedom Node can be extended with both a presence and daylight sensor for maximal ease of installation and energy saving for the end-user.

Bastiaan de Groot, CEO of Ingy: "We are very excited with this partnership, Helvar is a well-known player in the lighting industry and we see great demand for Helvar drivers and Freedom Node with Ingy pre-integrated from our global network of partners. By integrating our wireless module with the Freedom gives our customers both a very short time to market and a very cost-efficient solution, giving them the best of both worlds."

Tero Päärni, Head of Luminaire Components Sales at Helvar: "We are really happy to add Ingy to our rapidly growing ecosystem of Helvar Freedom partners. The Ingy solution running on Wirepas mesh offers Freedom users a highly scalable smart lighting system, added with a wide range of integration possibilities to beyond lighting functionalities, which have a growing demand among our customers."

To learn more about the Helvar Freedom product family and the Ingy smart lighting system please join the Freedom Partner series webinar about Ingy on Friday 20th March with Tero Päärni and Bastiaan de Groot. Register here: <https://register.gotowebinar.com/register/3110380262000035852>
