

A Helvar Case Study

Zleep Hotels Denmark

Helvar

Vanpee

An efficient solution promises a good night's Zleep

Zleep Hotels was created in 2003 based on the basic ideas of low room rates, comfortable beds to sleep in, TV with a lot of channels, free internet access, private bathroom and a nice cup of coffee for breakfast.

Zleep Hotels have 13 hotels in Denmark and one in Stockholm. The Danish hotel chain prioritizes environmentally friendly solutions and sustainable alternatives, constantly setting new requirements for itself, its partners and operating processes.

Energy saving solutions has been a focus when it comes to the

lighting at the hotels. All rooms are equipped with LED lights to ensure lower energy consumption and in three of the locations, Helvar was chosen for the lighting controls.

The light is controlled by Helvar 905 routers, and using 454 and 452 dimmers gave the possibility of leading or trailing edge dimming of the LED lights at the hotels.

The use of Helvar control has created a contemporary and comfortable lighting environment for the Zleep Hotels.
